Results 1 - 13 of 13 **short listing**

- 1** **Discovery and Advertising: Advertising in a pervasive computing environment** 80%
Anand Ranganathan , Roy H. Campbell
Proceedings of the second international workshop on Mobile commerce
September 2002
The advent of the internet has revolutionized the field of advertising by providing a whole new path for reaching potential customers. Studies show that online advertising is, on the whole, extremely effective and that consumer acceptance of online advertising is comparable to traditional media[7][8]. One of the reasons for the high effectiveness of online advertising is that users interact with the web at a far more personal and intimate level than they interact with other advertising media lik ...
- 2** **Computer applications in a cable television environment** 80%
Howard Buckholtz , Eileen Buckholtz
Proceedings of the annual conference August 1973
The intention of this paper is to survey the field of cable television and computer applications.
- 3** **Polychannel systems for mass digital communications** 77%
David K. Gifford
Communications of the ACM February 1990
Volume 33 Issue 2
A new type of distributed computer system looks toward the time when computers will be used by everyone everywhere.

- 4** Multicast Video-on-Demand services 77%
 Huadong Ma , Kang G. Shin
ACM SIGCOMM Computer Communication Review January 2002
Volume 32 Issue 1
The server's storage I/O and network I/O bandwidths are the main bottleneck of VoD service. Multicast offers an efficient means of distributing a video program to multiple clients, thus greatly improving the VoD performance. However, there are many problems to overcome before development of multicast VoD systems. This paper critically evaluates and discusses the recent progress in developing multicast VoD systems. We first present the concept and architecture of multicast VoD, and then introduce ...
- 5** Columns: Risks to the public in computers and related systems 77%
 Peter G. Neumann
ACM SIGSOFT Software Engineering Notes January 2001
Volume 26 Issue 1
- 6** Electronic commerce: a half-empty glass? 77%
 Sasa Dekleva
Communications of the AIS June 2000
- 7** Current technological impediments to business-to-consumer electronic commerce 77%
 Gregory Rose , Huoy Khoo , Detmar W. Straub
Communications of the AIS June 1999
- 8** Unlinkable serial transactions: protocols and applications 77%
 Stuart G. Stubblebine , Paul F. Syverson , David M. Goldschlag
ACM Transactions on Information and System Security (TISSEC) November 1999
Volume 2 Issue 4
We present a protocol for unlinkable serial transactions suitable for a variety of network-based subscription services. It is the first protocol to use cryptographic blinding to enable subscription services. The protocol prevents the service from tracking the behavior of its customers, while protecting the service vendor from abuse due to simultaneous or cloned use by a single subscriber. Our basic protocol structure and recovery protocol are robust against failure in protocol termination. ...
- 9** The design and implementation of an intentional naming system 77%
 William Adjie-Winoto , Elliot Schwartz , Hari Balakrishnan , Jeremy Lilley
ACM SIGOPS Operating Systems Review , Proceedings of the seventeenth ACM symposium on Operating systems principles December 1999
Volume 33 Issue 5
This paper presents the design and implementation of the Intentional Naming System (INS), a resource discovery and service location system

for dynamic and mobile networks of devices and computers. Such environments require a naming system that is (i) expressive, to describe and make requests based on specific properties of services, (ii) responsive, to track changes due to mobility and performance, (iii) robust, to handle failures, and (iv) easily configurable. INS uses a simple language based o ...

10 IP multicast channels: EXPRESS support for large-scale single-source 77%

 applications

Hugh W. Holbrook , David R. Cheriton

ACM SIGCOMM Computer Communication Review , Proceedings of the conference on Applications, technologies, architectures, and protocols for computer communication August 1999

Volume 29 Issue 4

In the IP multicast model, a set of hosts can be aggregated into a group of hosts with one address, to which any host can send. However, Internet TV, distance learning, file distribution and other emerging large-scale multicast applications strain the current realization of this model, which lacks a basis for charging, lacks access control, and is difficult to scale. This paper proposes an extension to IP multicast to support the *channel* model of multicast and describes a specific realizat ...

11 Digital newspapers explore marketing on the Internet 77%

 Jonathan W. Palmer , Lars Bo Eriksen

Communications of the ACM September 1999

Volume 42 Issue 9

12 Shopping models: a flexible architecture for information commerce 77%

 Steven P. Ketchpel , Hector Garcia-Molina , Andreas Paepcke

Proceedings of the second ACM international conference on Digital libraries July 1997

13 Internet television: Net makeover? 77%

 Dan Schiller

netWorker March 1997

Volume 1 Issue 1

Results 1 - 13 of 13 short listing
